

Product: Rescue stretcher

Type: RsqTec COCOON

Product description

The rescue stretcher „COCOON” is a combination of patient transport device and lifebelt and has been tested and certified according to DIN EN 1497:2007 and DIN EN 1865-1:2015 clause 5.4.1.

The stretcher is especially suited for rescue scenarios in confined space, in shafts and for mountain rescue. One of the main advantages is its light weight and its ability to be rolled together creating a much smaller size for storage and/or transportation. The preparation for use is done within seconds. The simple assembly on site enables a quick rescue operation. The rescue stretcher can be used horizontally and vertically. (image includes accessories).

The Personal Carry Device System (PCDS), which is required for the transport of people as external loads on the helicopter (Human external cargo, HEC) during operations, is for air rescue according to EASA CM-

Tariff number: 63072000

Technical specification:

Dimensions:	2200x550x340 mm	
(1)	Height to anchor point	
	A: 1110mm	
Dimensions:		
(pack size in carrying bag) (2)	Ø = 420 mm Height: 880 mm	
Weight:	11,5 kg	
Max. nominal load:	140 kg	
Lifetime:	10 Jahre	
Environmental temperature:	Min. - 40 °C - 40 °F	Max. + 60 °C + 140 °F
Application areas:		
Mountain rescue, air rescue and height rescue from difficult to access areas, tight spaces and shafts.		
Standards:		
DIN EN 1497:2007		
DIN EN 1865-1:2015 (clause 5.4.1)		
Suggested accessories:		
Foot sling (3)	Vacuum stretcher pad (6)	
Carrying bag (4)	Anti-rotation-sail (7)	
Neck support pillow (5)	Face protection (8)
